Summary

As a Full-stack Developer, I focus on building secure, scalable products that solve real business needs. My recent work on a healthcare platform involved engineering bank-grade secure systems (JWT/Auth) and intelligent AI consultations (Gemini API) to automate user engagement. By leveraging a .NET and React stack within Docker environments, I ensure high system reliability and a seamless transition from code to production. I'm ready to apply this engineering mindset to help your team deliver high-quality, user-centric solutions.

Technical Skills

- **Technical Skill:** Linux, ReactJS, C#/ Oop/ Net Framwork, JavaScript, Docker, Server.
- **Soft skills:**

Work Experience

Học Viện CNTT Và Quản Trị UPSKILL | 11/2025 - Present
IT Support Consultant
Technologies:
Linux

Học Viện CNTT Và Quản Trị UPSKILL | 11/2025 - Present
Full-stack Developer
Responsibilities

- Designed and developed backend APIs with ASP.NET Core Web API and SQL Server. Built frontend screens and integrated APIs using React, TypeScript, Redux Toolkit, and Axios. Applied authentication, authorization, validation, API error handling, and environment configuration. Worked with Git/GitHub for version control and feature updates.
- Technologies:**
React/Typescript,C#/ Oop/ Net Framwork,Docker

Education

Posts and Telecommunications Institute of Technology | 08/2024 - Present
Major: Information technology

- Degree: Bachelor

Projects

Project: PharmaIntel-AI – AI-powered Pharmacy Management Platform

Time: 02- 2026- - Now

Description:

- **Summary:** Built an AI-powered pharmacy platform with 6+ core modules, including authentication, prescription management, pharmacist review, cart, order processing, payment tracking, AI consultation, and medication reminders.
- **Technology:** ASP.NET Core Web API, React, TypeScript, SQL Server, EF Core, JWT, Docker, Gemini API
- **Responsibilities:**
 - Developed 20+ RESTful APIs using ASP.NET Core Web API and Entity Framework Core, supporting 3 end-to-end workflows from prescription upload to pharmacist review, checkout, and medication reminder management. Designed 10+ SQL Server tables/entities to manage users, medicines, prescriptions, carts,

orders, payments, and reminders with relational data consistency.

- Implemented JWT Authentication and Role-based Access Control for 3 roles, improving security across patient, pharmacist, and admin operations.
- Designed an AI consultation module with a RAG-ready architecture, enabling the system to retrieve relevant medical/pharmacy context before generating responses with Google Gemini API.
- Built 15+ React/TypeScript screens and components, integrating backend APIs with Redux Toolkit and Axios.
- Configured Docker Compose for backend, frontend, and SQL Server, simplifying local setup and improving development reproducibility.
