EDUCATION

Posts & Telecommunications  
Institute of Technology  
B.Sc. Information Technology  
08/2023 – Present

TECHNICAL SKILLS

BACKEND  
C# / .NET ASP.NET Core EF Core  
REST API JWT / Auth SQL Server  
FRONTEND  
React TypeScript Redux Toolkit  
Axios  
DEVOPS & TOOLS  
Docker Git / GitHub Linux  
Gemini API

CERTIFICATES

Advanced Frontend Development  
Rikkei Academy  
Linux Administration (LPIC-1, LPIC-2)  
UpSkill Academy · Grade 8.0/10.0

PROFILE

I built a **production-ready, AI-powered pharmacy platform** from scratch — JWT security, Gemini AI consultation, full Docker deployment — before finishing my first year of university. My work on PharmaIntel-AI covers the full stack: 20+ RESTful APIs in ASP.NET Core, 15+ React/TypeScript screens, and a RAG-ready AI module, all shipped as a reproducible Docker environment. I'm looking for a C# backend or fullstack internship where I can contribute real deliverables on day one, not spend months reading documentation.

20+ APIs · 15+ UI Screens · 3 User Roles · 1 AI Module — shipped in 1 project

EXPERIENCE

**Full-Stack Developer** · UPSKILL IT Academy 11/2025 – Present  
ASP.NET Core React TypeScript Redux Toolkit Docker SQL Server Git  
— Designed and developed **backend APIs** with ASP.NET Core Web API and SQL Server, handling authentication, authorization, validation, and error handling end-to-end.  
— Built and integrated frontend screens using **React, TypeScript, Redux Toolkit, and Axios**; maintained codebase with Git/GitHub across feature iterations.  
— Contributed to containerized environments with **Docker Compose**, reducing onboarding setup time for new team members.

FEATURED PROJECT

**PharmaIntel-AI** 02/2026 – Present  
*AI-powered Pharmacy Management Platform · 6+ core modules*  
github.com/NguyenQuangHoang/PharmaIntel-AI medicalpharmal.com · Live Demo  
ASP.NET Core Web API EF Core SQL Server JWT React TypeScript Redux  
Docker Gemini API  
— Engineered **20+ RESTful APIs** supporting 3 end-to-end workflows: prescription upload → pharmacist review → checkout → medication reminder.  
— Designed **10+ SQL Server tables** managing users, medicines, prescriptions, carts, orders, payments, and reminders with full relational integrity.  
— Implemented **JWT + Role-Based Access Control** across 3 roles (patient, pharmacist, admin), securing all sensitive clinical operations.  
— Built a **context-aware AI consultation module** that injects structured pharmacy/medication context into prompts before calling Google Gemini API — delivering accurate, domain-specific responses without manual pharmacist Q&A.  
— Built **15+ React/TypeScript components** and configured Docker Compose for the full stack, enabling one-command local environment setup.
